

2020 SFRC PEEKING GROUNDHOG TARGETS

300: The 10 ring and the "eyeball" are the same 0.75 inches, outside diameter. The extra-points "pupil" is located inside the "eyeball", and this "pupil" is 0.40 inches, outside diameter. A participant can shoot all, none, or any combination of the 5 record rounds at the "pupil". The "pupil" will score 12 points. The eyeball will score 10 points. All the other target ring values are as shown. Any hit outside the eyeball, that is in the groundhog body and not in any of the scoring rings, will score a 5. You can simply shoot all 5 record rounds at the scoring rings. Best-edge scoring will be used at this yardage. Unlimited sighters are allowed in the area below the groundhog, but sighters must be below the separating line. Any hit outside the groundhog body is 0 points.

200: One record round is shot at each of the 5 standing groundhogs. Unlimited sighters are allowed at the lower-right groundhog. The 10 ring and the "eyeball" are the same 0.45 inches, outside diameter. The extra-points "pupil" is located inside each of the 5 eyeballs, and this "pupil" is 0.20 inches, outside diameter. At each of the 5 record groundhogs, a participant can shoot at either the scoring rings, eyeball, or the pupil. The pupil will score 12 points. The eyeball will score 10 points. All the other scoring ring values are as shown. Any hit outside the eyeball, that is in the groundhog body and not in any of the scoring rings will score a 5. Best-edge scoring will be used at this yardage. All sighters must be within the borders of the lower-right target, and any hit outside the groundhog body is 0 points.

100: One record round is shot at each of the 5 peeking groundhogs. Unlimited sighters are allowed at the lower-right target. The scoring ring dimensions are the same as last season. The difference is that the 10 ring extends down into the grass area, and there is a small "dot" in the center of each 10 ring. At each of the 5 record groundhogs, the participant can shoot at the scoring rings or the "dot". Touching any part of the dot scores 12 points, and the value of each of the other scoring rings is as shown. **PLEASE NOTE...** the line that separates the grass from the 10 ring **IS CONSIDERED** to be the grass. In other words, if your bullet touches the line, but does not break through the line it still will be judged as a grass deduction of 5 points. This will be **WORST-EDGE** scoring on this part of the target. You do not have to wipeout the dot to receive 12 points. All sighters must be within the borders of the lower-right target, and any hit outside the groundhog body is 0 points. Hitting the grass scores a 5.
